The NP01 Series Illuminated Pushbuttons will have changes to the single and bicolor LEDs. The change will effect all models, both standard and custom. Differences in the LED specification values are outlined in the following tables.

NP01 Pushbutton

Notes

- Specifications in () in table above denote simultaneous illumination of Red and Green.
- LEDs are an integral part of the switch and are not available separately.
- If the source voltage exceeds the rated voltage, a ballast resistor is required. The resistor value can be calculated by using the formula shown here.
- The changes to bicolor LEDs do not affect any external dimensions of the switches.
- Contact the factory if further details are needed.
